

WHO WE ARE

At SGInnovate, we enable entrepreneurial scientists to launch, prove, build, and scale Deep Tech innovations from Singapore for the world. We passionately believe that Singapore has the resources and capabilities to 'tackle hard problems' that matter to people globally.

Our **Deep Tech Nexus** strategy was launched in 2017 and highlights our sharp focus on transformational technologies such as artificial intelligence (AI), quantum technology, and robotics that have horizontal applications to many industries, as well as MedTech which impacts healthcare solutions worldwide.

SGInnovate is a private organisation wholly-owned by the Singapore government. [Our Board](#) comprises a team of well-respected government leaders and captains of industry with vast experience within the technology and economic sectors.

DEEP TECH NEXUS STRATEGY

Through our Deep Tech Nexus strategy, we are committed to add tangible value to the Singapore deep tech startup ecosystem in two key areas – developing **Human Capital** and deploying **Investment Capital**.

HUMAN CAPITAL	INVESTMENT CAPITAL
Enhancing capabilities of talents through a range of Deep Tech-related learning opportunities	Investing equity in early-stage Deep Tech startups, investing more than S\$51 million since our inception
Expanding Deep Tech talent networks through active engagements locally and internationally	Business building support, working closely with startups that SGInnovate has invested in areas such as fundraising, sales, strategy, branding and talent
Strengthening Deep Tech communities through Deep Tech-related networking events	

OUR ACHIEVEMENTS

80+

Investments

300+

Events created and hosted at SGInnovate

44,000+

Participants at SGInnovate events

34,000+

Individuals in SGInnovate's deep tech talent and community networks

OUR TALENT DEVELOPMENT PROGRAMMES

To build a database of Deep Tech talent, SGInnovate works closely with universities, polytechnics, and the Singapore-MIT Alliance for Research and Technology (SMART). We provide world-class learning opportunities with partners like NVIDIA and Red Dragon AI to deepen talent capabilities.

Deep Tech community and networking events are also regularly hosted at our space in 32 Carpenter Street with the goal of creating a two-sided marketplace where talented people and high-potential startups can find each other.

Our [SGInnovate Summation Programme](#) helps place students in Science, Technology, Engineering, Mathematics (STEM) disciplines from local and overseas Institutes of Higher Learning (IHLs) in some of the most promising Deep Tech companies, where they will work and learn under the mentorship of experienced software and engineering professionals, embarking on innovative and impactful Deep Tech projects. In addition, we hold exclusive, by-invite only talent networking sessions, [COMET](#), where highly sought-after Deep Tech talent will have dedicated 1-1 virtual meetings with high-potential Deep Tech companies to explore potential job or collaboration opportunities.

OUR INVESTMENTS & PORTFOLIO

Our investment strategy is two-pronged – to **build** and **invest**.

Venture Building Team

Focuses on early-stage Deep Tech startups in Singapore, leveraging on our expertise and experience to help founders start and grow their businesses.

We provide business building advice and work closely with the teams on areas such as fundraising, sales, strategy, branding and talent.

Venture Investing Team

Focuses on scalable Singapore and overseas startups with proven technology and market traction, which addresses gaps within the Deep Tech landscape.

We help to speed up their internationalisation through collaboration with our overseas portfolio companies and tap into our global network of institutional investors.

We invest in promising Deep Tech startups from pre-seed through Series A, primarily those built on Singapore-based IP. Some of the companies in our portfolio include: [AID:Tech](#), [AIDA Technologies](#), [Biofourmis](#), [Horizon Quantum Computing](#), [KroniKare](#), [Medo AI](#), [Portcast](#), [Propine Capital](#) and [See-Mode Technologies](#), to name a few.

OUR DEEP TECH CO-INVESTORS

SGInnovate is co-managing a fund under the [Startup SG Equity](#) scheme. To date, SGInnovate and its partners have completed more than 40 co-investment deals. These companies are primarily working on Deep Tech innovations that have applications across a wide range of industries.

With an additional S\$300 million committed by the Singapore Government at Budget 2020 to catalyse more investments into Singapore-based Deep Tech startups in key emerging sectors such as Advanced Manufacturing, PharmBio/MedTech, and Agri-food Tech, the Startup SG Equity scheme is expected to draw more than S\$800 million of private funding over the next decade.

The 22 co-investors under this scheme are:

August Global Asset Management	C31 Ventures	Cocoon Capital	Decacorn Partners
Dymon Asia Ventures	Elev8.VC	Gobi Partners	Golden Gate Ventures (with LuneX Ventures)
Jungle Ventures	Mojo Partners	Monk's Hill Ventures	Openspace Ventures
Pix Vine Capital	Qualgro Partners	ST Engineering Ventures	Strive
Supply Chain Angels	TNF Ventures	tryb Group	Verge Capital Management
	Vickers Venture Partners	Wavemaker Partners	

WHO WE WORK WITH

We support, work with, and are part of a myriad of organisations and initiatives that make up the community – all of which we are proud to call [friends of SGInnovate](#).
